

09.03.2026

To Whom It May Concern,

İÇDAŞ A.Ş. is one of the largest steel manufacturing companies of Turkey. With its factory in Biga, Çanakkale, İÇDAŞ manufactures steel biletts, plain and deformed concrete reinforcing bars and wire rods. The raw mateirals used in the producing of rebar and wire mesh come from Turkey and Europe.

Most of steel production includes recycling of used metals. The used metals are harvested and melt in our factory in Biga.

In 2025, 100% of the produced rebar and wire mesh was made from recycled metal. Of this percentage 97% were post-consumer and 3% were pre-consumer metals.

Should you have any other questions, please don't hesitate to contact us.

Sincerely.

Mustafa BALCI  
Intagrated Management Representative
